High performance
with a wide range of
solutions and options.

Product description

The Bizerba CS 300 TE expands the cash register solution into a complete POS workstation. Even in confined work spaces, precise weighing can be guaranteed with this device built into the counter or countertop. The checkout procedure is optimized. The basic price – either with or without tare– is transferred from the POS system to the scale that calculates the sales price based on the determined weight. Multiple interfaces to the common POS systems are available in the standard. Optionally, you can choose between a software or a hardware display. The control buttons for zero setting, taring and opening the scale menu are integrated in the displays or if a software display is used, they are integrated into an external control element.

CS 300 TE (built-in version)

Highlights

- RS 232 interface for connection to current and future POS systems included in the standard
- Data dialogs are available for all common POS systems
- Hardware displays as well as Software Display solution for displaying weight and price information available
- Reliable, powerful multi-interval weighing system - Made in Germany

Options

- Software Display license for the metrologically approved display of the weighing data on the POS display
- Separate one- or two-sided P-display (weight, unit price, total price and tare) on a pole or holding angle
- Separate one-sided WS-display (weight) on a pole or holding angle
- External control element (tare/reset key)
